Fronius

Product advantages

Fronius was founded over 70 years ago. Since 1992 the global corporation is concerned with solar electronics and has become one of the leading inverter manufacturers. Fronius' major focus is on the quality of its products which range from efficient grid connected inverters over monitoring devices to storage solutions.

The company's high standards are not solely reflected in the product portfolio: The technical support and the unique Fronius Service Partner Program are essential components of Fronius' philosophy.

SHIFTING THE LIMITS

Production in Sattledt, Austria

1. Inverters for every use

- Broad product range: single-phase or three-phase, with or without transformer, from 1.5 to 100 kW
- Built-in data communication with WLAN/LAN and smartphone connection

2. Smart and flexible

- Integrated energy management optimizes self consumption
- Fronius Symo (3 - 20 kW) with multi MPP-trackers
- Fronius Eco: cost-optimized project inverter with highest reliability
- Smart grid ready (for future integration in smart grids)

3. Reliable service

- Service Partner concept: the fastest service available on the market with PC board replacement
- Fronius TechSupport: competent experts on the technical hotline
- Optional warranty extension up to 10, 15 and 20 years

4. Mature storage systems

- A modular system that consists of inverter, Smart Meter and battery (4.5 - 12 kWh)
- High efficiency thanks to DC coupling
- Emergency power function can be retrofitted, storage capacity extendable
- Lithium iron phosphate technology
